Hiring Team
Digital Room (Philippines), Inc.
Mandaluyong City, Metro Manila (Remote)

Subject: Application for Junior Developer

Hi Digital Room team,

I came across your opening for a Junior Developer, and when I saw that you welcome fresh grads and offer a fully remote setup, I knew I had to reach out. I recently graduated with a Computer Science degree from Cebu Institute of Technology - University, and I'm looking for a team where I can roll up my sleeves, write good code, and build a solid foundation for my career.

Over the past few years, both in school and during internships, I've spent most of my time building web apps and making sure they actually work when real users touch them. During my internship at DXForm Technologies, I worked as a QA Analyst. My day-to-day was testing websites, hunting down weird layout glitches across different browsers, checking whether backend APIs were responding properly, and figuring out why something broke. That gave me a healthy respect for paying attention to the small details and writing cleaner, more dependable code from the start.

When it comes to building, my go-to tools are JavaScript, TypeScript, React, and Node.js. I've put together projects like TakeIt (an event booking and ticketing web app) and Nexchef (an app with live cooking timers), handling everything from the user interface and responsive styling to server routes and database queries. I'm also comfortable with Git, working through tasks in Agile/Scrum sprints, and digging into logs when something isn't behaving right.

I know this is a junior role, and I don't pretend to know every tool under the sun on day one. But what I do bring is a strong grasp of the fundamentals, an eagerness to learn your codebase inside out, and the discipline to communicate clearly and take ownership of whatever tasks are handed to me. Working remotely suits me well. I'm organized, self-motivated, and used to getting things done without needing someone looking over my shoulder.

I would really welcome the chance to speak with someone on the team, learn more about what you're working on at Digital Room, and see if I'd be a good fit. Thank you very much for your time and for considering my application.

Warm regards,

Roddneil B. Gemina
